“ It went extremely well, could not have gone any better. The crew of Brett, Alex and Gavin were outstanding in every regard! They were very prompt and very professional. I expected to have to clean up after them but there was nothing to clean up at all. You would never know they had been here except for the generator outside. I would hire Oak Electric again, for any job, in a heartbeat!

“The staff were very professional and knowledgeable, explaining clearly what needed to be done. Installers were on time and everything they did—the panel, the gas line, and the generator were installed expertly and in addition it all looks good! I highly recommend them.

Description of work:

We had a Generac Generator installed and our electric panel replaced about two years ago. We have had routine maintenance on the generator two times, the last time was November 2017.

11/08/2017 – Thomas Fleming

“ On the day of our appointment the salesman, Bob Mayes called to say he was on his way to our house and arrived when he said he would. He explained how whole house generators worked and what "sizes" they came in. He asked what things in the house we wanted powered up during an outage. Based on that, he recommended a mid-sized generator which would power everything except the electric stove. Since an electric stove draws so much current it would require a much more expensive generator. With the generator size he recommended we would be able to use our microwave and/or an electric frying pan to cook on during an outage. Seemed reasonable to us. He looked at our electrical panel to be sure there was room for the transfer switch and looked outside for proper location of the generator. Before he left, Bob typed up the quote on he tablet and scheduled our installation date. We needed to purchase a larger gas meter from Consumers and Bob told us who to call and what to ask for. When our installation day arrived the crew arrived on time. The three technicians unloaded the generator and moved it into place. They each had a job to do and did it professionally. They worked well as a team and were friendly and polite. When finished, one tech explained the operation of the generator and did a test run. They did a great job. I called the office to inquire how to register the generator with Generac and they handled that and the application for the free extended warranty. All in all on excellent job, well done.

“ The installation and follow up service was performed in a very professional manner, including scheduling reminders and time of arrival. Based on the operation of the system, the technical quality of the installation is excellent. The technicians at Oak Electric are friendly, polite and neat.

Description of work:

Oak Electric installed our 5 kW natural gas powered Generac backup electric generator system more than one year ago and have been performing the required maintenance since that time. It operated flawlessly during the 6-day power outage during the winter of 2017.
